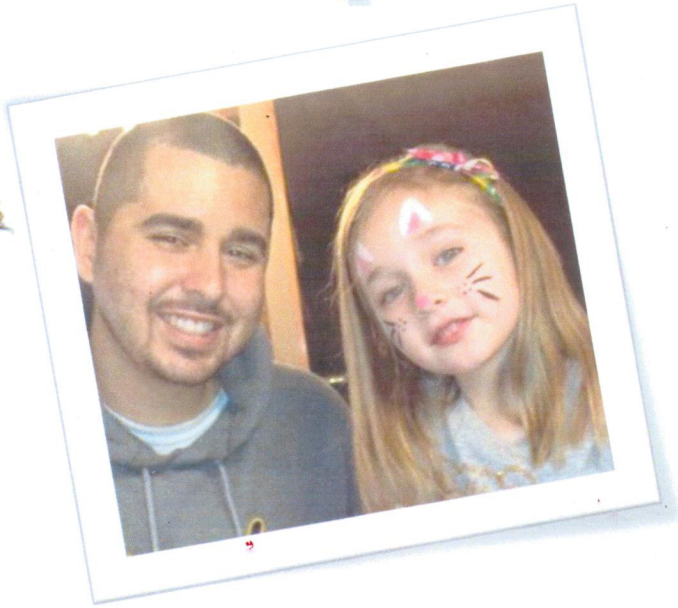
Shop til Ya Drop for Joe Joe



Joe Tocco has "Severe Aplastic Anemia". Aplastic Anemia develops when damage occurs to your bone marrow, slowing or shutting down the production of new blood cells (red, white and platelets).

Joe has been through 5 different treatments...IVIG, Atgam Cyclosporine, Bone Marrow Transplant, Rituxan & Stem Cell Infusion. None of these have worked because he has encounterd major graph failure. Now Joe is on the Bone Marrow list in search of an unrelated matched doner, to try to save his life with another transplant.

Joe cannot work or be in any enviornment that puts his immune system in jeopardy. He has a wife, a 6 year old daughter and a recently born baby girl. This benefit will help Joe and his family greatly!
